Together, Pilz and Deltron are driving forward the modernisation of Indian signalling technology - Closer cooperation for Indian railways

Ostfildern, 09.10.2024 - **The automation expert Pilz and the Indian signalling technology company Deltron agree to intensify their long-standing cooperation. They will work together to develop flexible signalling technology solutions for the Indian railway market.**

With its safe, modular railway controller PSSrail, Pilz offers a particularly flexible platform for system suppliers in railway technology, designed for global use.

Digitisation of the Indian railway infrastructure

The two family businesses Pilz and Deltron have been working together for several years on solutions for applications in railway signalling technology. These have been installed and put into service at numerous railway stations in various parts of India. Now the two companies are widening their cooperation: the proposed solution is SIL-4 certified and compatible with the EULYNX standard.

“Our experience from numerous international railway infrastructure projects and Deltron’s understanding of the individual requirements of the Indian railway market are the basis for successful cooperation,” says Sebastian Lüke, Head of Business Unit Rail at Pilz, describing the collaboration. “We offer tailor-made, innovative solutions for a modern Indian railway infrastructure, based on our safe, modular railway controller PSSrail.”

“What we value about Pilz solutions is their reliability. Thanks to their modular design, they satisfy all our signalling technology requirements,” emphasises Indranil Mukherjee, Director of Deltron Equipment & Systems.

Pilz - The Spirit of Safety

Pilz is a global supplier of products, systems and services for automation technology. As a pioneer of safe automation, Pilz creates safety for human, machine and environment. Founded in 1948, today the family business with its head office in Ostfildern is represented worldwide with 2500 employees in 42 subsidiaries and branches. The technology leader offers complete automation solutions for Safety and Industrial Security on the machine. These include sensor, control and drive technology - as well as systems for industrial communication, diagnostics and visualisation. An international range of services with consulting, engineering and training completes the portfolio. Pilz solutions are used in many industries beyond mechanical engineering, such as intralogistics, packaging, railway technology, or the robotics sector for example.
